DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 11 and 12 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Second shaft critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The limitation of the second shaft does not disclosed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over the “Admitted Prior Art” as shown in Fig. 1 in view of the Japanese Patent 2-125963. The “Admitted prior Art” as shown in figure 1 shows a flywheel mounted on a crankshaft in an outboard motor including an internal combustion engine. The difference between the prior art reference and the instant invention is the provision of a coupling portion of the flywheel over the crankshaft to fasten.

Art Unit: 3747

The Japanese patent 2-125963 shows that the provision of a coupling portion (11) of the flywheel (8) over the crankshaft (7) to fasten is old and well known in the art. Regarding the claimed particular thickness of the flywheel portions, a spacer between the crankshaft and the flywheel, a second shaft, and the specific shape of the flywheel, It would have been considered to be an obvious choice of mechanical design because one skilled in this art is familiar with basic mechanic and normally has the laboratory test facilities. To optimize or select the shape and thickness would be within the ability of ordinary skilled in this art. Especially, the provision of a spacer between the crankshaft and the flywheel, it would be within the one of ordinary skill in the art to provide an extension shaft, if needed.

Response to Arguments

Applicant's arguments with respect to claims 9-24 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 3747

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
